Current absolute error budgets: corrected references, further-relaxed configurations

SPO: S/L/T/O = 6.25/15.625/9.375/6.25% | CGO: 11.25/24/11.25/7.5%

Source information (S)

Parameter / unit	Reference σ	SPO σ	CGO σ
Source carbon [per mil]	0.7	0.04375	0.07875
SH / tropical D [per mil]	7.653	0.4783	0.861
NH D [per mil]	5.102	0.3189	0.574
Source normalization [Tg/yr]	50	3.125	5.625
Each B/C [% of |coefficient|]	20	1.25	2.25

Sink information (L)

Parameter / unit	Reference σ	SPO σ	CGO σ
OH fraction [percentage points]	4	0.625	0.96
Cl fraction [percentage points]	1	0.1562	0.24
Soil fraction [percentage points]	2	0.3125	0.48
OH D KIE [dimensionless]	0.009	0.001406	0.00216
Cl carbon KIE [dimensionless]	0.001	0.0001563	0.00024
Cl D KIE [dimensionless]	0.0205	0.003203	0.00492

Transport response (T)

Parameter / unit	Reference σ	SPO σ	CGO σ
NH weight [percentage points]	2	0.1875	0.225
Tropical weight [percentage points]	10	0.9375	1.125
NH lag [months]	0.5	0.04688	0.05625

Monthly residual noise (O)

Parameter / unit	Reference σ	SPO σ	CGO σ
SPO Carbon-13 [per mil]	0.07241	0.004526	—
SPO Deuterium [per mil]	2.926	0.1828	—
CGO Carbon-13 [per mil]	0.09576	—	0.007182
CGO Deuterium [per mil]	2.508	—	0.1881

All entries are pre-projection 1σ error scales, not hard bounds. Source/sink/transport scenario assumptions remain.

Monthly residual noise is not instrument-only precision. Passing combinations are discrete tested points, not continuous limits.
